App will start

App will begin by calling to the database "SSL"

All rows from table "fruits" will be selected using 'prepare', then returned to the browser using 'fetchAll()'

A foreach loop will then be used to print the values for 'fruitname' and 'fruitcolor'

No values will be displayed in browser

Is there data inside table "fruits"?

No

Yes

The returned values will then be echoed out to the browser

Returned values will display in browser

All steps have been completed
